| Annotations    | This event is used to inform DF-Client that a subscriber is in emergency state during an emergency group call including the ending of its emergency situation. Also queuing of emergency speech item requests is indicated using this event. Event is fired every time the TETRA system informs the Gateway that subscriber's emergency information is changed. For example, based on this information TCS Client could use pre-emptive speech item to request the current speaker to stop in order to let the unit in emergency to speak.                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Source         | <pre> &lt;xs:element name="Call_UnitInEmergencyEvent"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation&gt;This event is used to inform DF-Client that a subscriber is in emergency state during an emergency group call including the ending of its emergency situation. Also queuing of emergency speech item requests is indicated using this event. Event is fired every time the TETRA system informs the Gateway that subscriber's emergency information is changed. For example, based on this information TCS Client could use pre-emptive speech item to request the current speaker to stop in order to let the unit in emergency to speak.&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt;   &lt;xs:complexType&gt;     &lt;xs:complexContent&gt;       &lt;xs:extension base="ct:typeEvent"&gt;         &lt;xs:sequence&gt;           &lt;xs:element name="group" type="ct:typeSubscriberAddress"/&gt;           &lt;xs:element name="tetraCallId" type="xs:unsignedLong" minOccurs="0"/&gt; </pre> |

```

<xs:documentation>When the audio interface is LS1 VoIP, then each RTP SSRC could contain
information over which TBS the talking party currently speaks. "The channel identity shall be
unique within the Airbus DS TETRA system. It carries the identity of the channel from where
the NISI or OSTE frame entered IP network. (Either from TBS or from Switch unit on DXT)."</

| Annotations | Specifies transmission coverage information in a group call. Group area definition affects how the system tries to reserve resources. Group area can be defined as fixed or shifting area. If group area is defined as fixed, the system tries to reserve all cells that belong to the group area. If group area is defined as shifting area, the system tries to reserve only those cells where the group members are located.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                 |                                                             |
